Product Description

Before submitting an order you will be asked to read and accept the terms and conditions of ATCC's [Material Transfer Agreement](#) or, in certain cases, an MTA specified by the depositing institution.

Customers in Europe, Australia, Japan, Hong Kong, Korea, New Zealand, Singapore and Taiwan, R.O.C. must contact a [local distributor](#) for pricing information and to place an order for ATCC cultures and products.

Cell Lines

ATCC® Number: CRL-1593.2™

[Order this item](#)

Price: \$185.00

Designations: U-937

Depositors: H Koren

Biosafety Level: 1

Shipped: frozen

Medium & Serum: [See Propagation](#)

Growth Properties: suspension

Morphology: monocyte

Organism: *Homo sapiens* (human)

Source: **Disease:** histiocytic lymphoma

Cellular Products: lysozyme; beta-2-microglobulin (beta 2 microglobulin); tumor necrosis factor (TNF), also known as tumor necrosis factor alpha (TNF-alpha, TNF alpha), after stimulation with phorbol myristic acid (PMA)

Permits/Forms: In addition to the MTA mentioned above, other ATCC and/or regulatory permits may be required for the transfer of this ATCC material. Anyone purchasing ATCC material is ultimately responsible for obtaining the permits. Please [click here](#) for information regarding the specific requirements for shipment to your location.

|---------------------------|--|
| Restrictions: | The original U-937 cell line was established by Dr. K. Nilsson's laboratory in 1974 and he has requested the following: (1) In all papers reporting any use of this cell line or any derivatives thereof a direct reference should be made to Sundstrom and Nilsson (Int. J. Cancer 17: 565-577, 1976). (2) Any proposed commercial use of the cells should be negotiated with Pharmacia Diagnostics AB, S-751 82 Uppsala, Sweden; (3) No distribution of any of the cells or sublines derived therefrom should be made to third parties; (4) The cells should be used for non-clinical, non-commercial research only. |

| Age: | 37 years |
| Gender: | male |
| Ethnicity: | Caucasian |
| Comments: | <p>The U-937 cell line was derived by Sundstrom and Nilsson in 1974 from malignant cells obtained from the pleural effusion of a patient with histiocytic lymphoma. Studies since 1979 have shown that U-937 cells can be induced to terminal monocytic differentiation by supernatants from human mixed lymphocyte cultures, phorbol esters, vitamin D3, gamma interferon, tumor necrosis factor (TNF) and, retinoic acid.</p> <p>The cells are negative for immunoglobulin production and Epstein-Barr virus expression.</p> <p>The cells express the Fas antigen, and are sensitive to TNF and anti-Fas antibodies. In 1994, PCR and cytogenetic analyses showed that a number of stocks of U-937 were contaminated with the human myeloid leukemia cell line, K-562.</p> <p>In the earliest stocks available, the level of contamination was 0.6%. [40484]</p> <p>Distribution was discontinued in March 1994, except if required for patent purposes. Anyone who wishes to receive a sample of this original material should contact the Head of the ATCC Patent Depository.</p> <p>A stock of CRL-1593 found to be free of K-562 was propagated continuously for 8 weeks and tested weekly by PCR.</p> <p>Distribution and seed stocks give DNA profiles characteristic of U-937 only. Such preparations are now offered as authentic U-937 (ATCC <u>CRL-1593.2</u>) and are believed to be free of second subpopulations.</p> |
| Propagation: | ATCC complete growth medium: RPMI 1640 medium with 2 mM L-glutamine adjusted to contain 1.5 g/L sodium bicarbonate, 4.5 g/L glucose, 10 mM HEPES, and 1.0 mM sodium pyruvate, 90%; fetal bovine serum, 10% Temperature: 37.0C Atmosphere: air, 95%; carbon dioxide (CO2), 5% |
| Subculturing: | Protocol: Cultures can be maintained by the addition of fresh medium or replacement of medium. Alternatively, cultures can be established by centrifugation with subsequent resuspension at 1 to 2 X 10 ⁽⁵⁾ viable cells/ml. Interval: Maintain cell density between 1 X 10 ⁽⁵⁾ and 2 X 10 ⁽⁶⁾ viable cells/ml. Medium renewal: Add fresh medium every 3 to 4 days (depending on cell density) |
| Preservation: | Freeze medium: Complete growth medium supplemented with 5% (v/v) DMSO Storage temperature: liquid nitrogen vapor phase |
| Related Products: | Recommended medium (without the additional supplements or serum described under ATCC Medium): ATCC <u>30-2001</u> recommended serum: ATCC <u>30-2020</u> |
